Transforming field operations in Construction

with X-GPS Tracker app

Construction industry

The challenges in the Construction industry

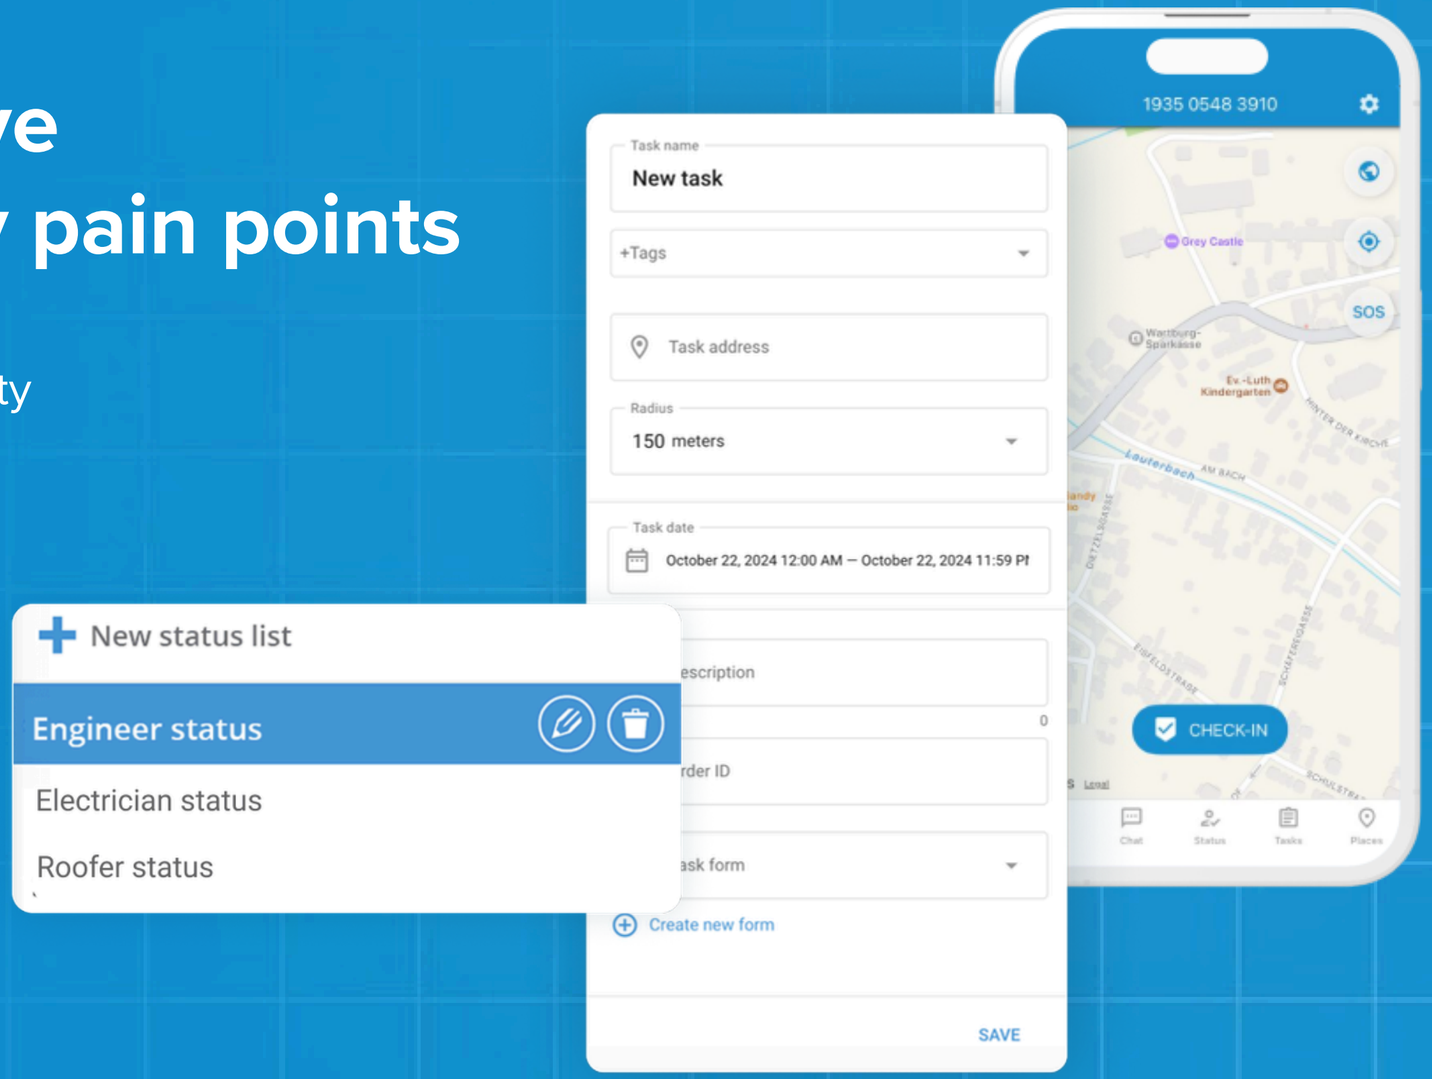
- → Difficulty tracking field teams and vehicles
- → Compliance issues with safety regulations
- → Inefficiencies leading to project delays and lost productivity

Navixy provides the digital tool, the X-GPS Tracker app, to address these challenges.

Construction industry

Key features that solve Construction industry pain points

- Forms for compliance and productivity
- Task assignment and monitoring
- Real-time tracking

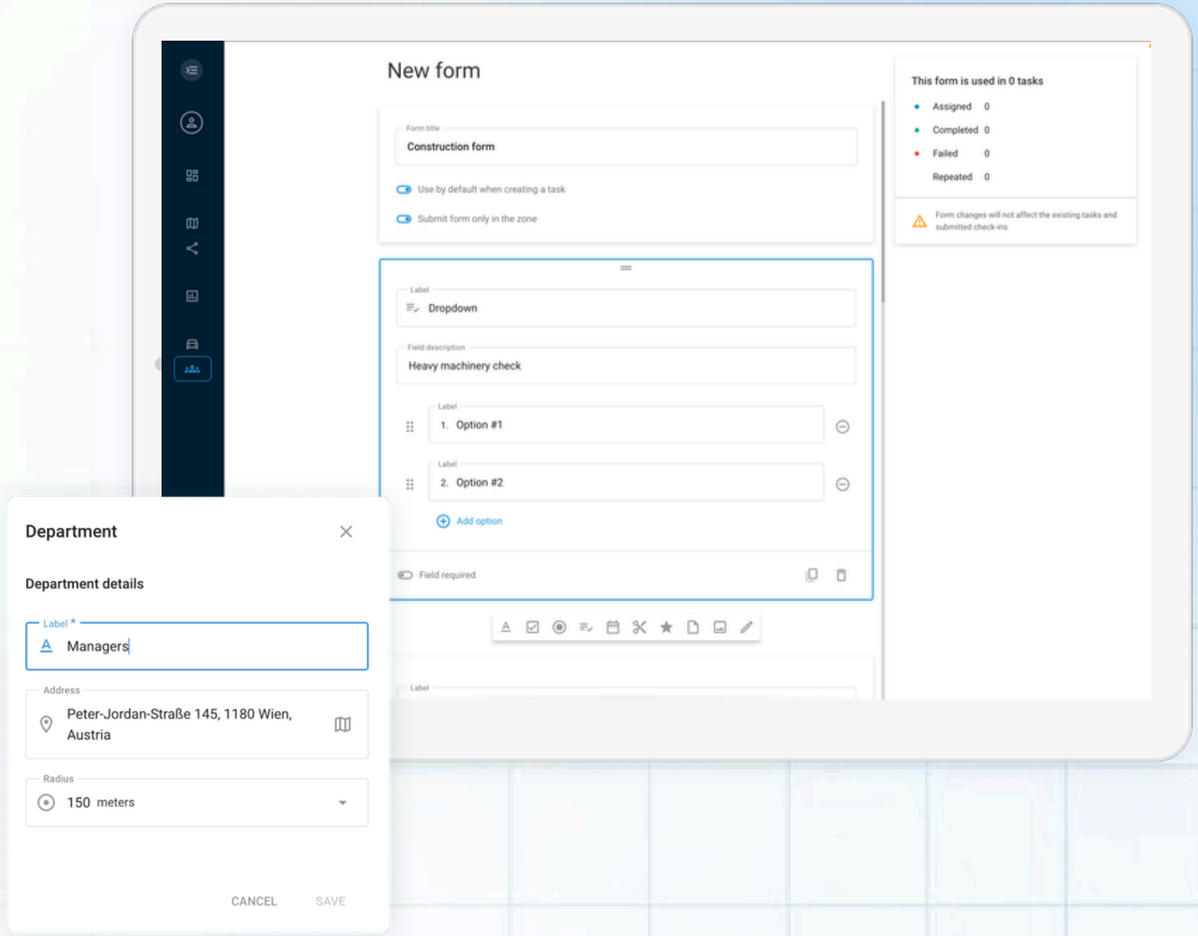


Construction industry

Forms for compliance and productivity

The X-GPS Tracker app includes forms that make tasks like pre-trip truck inspections, safety checks, and clock-in/out reporting easy and accurate.

For construction companies, this means fewer errors and a more standardized workflow.

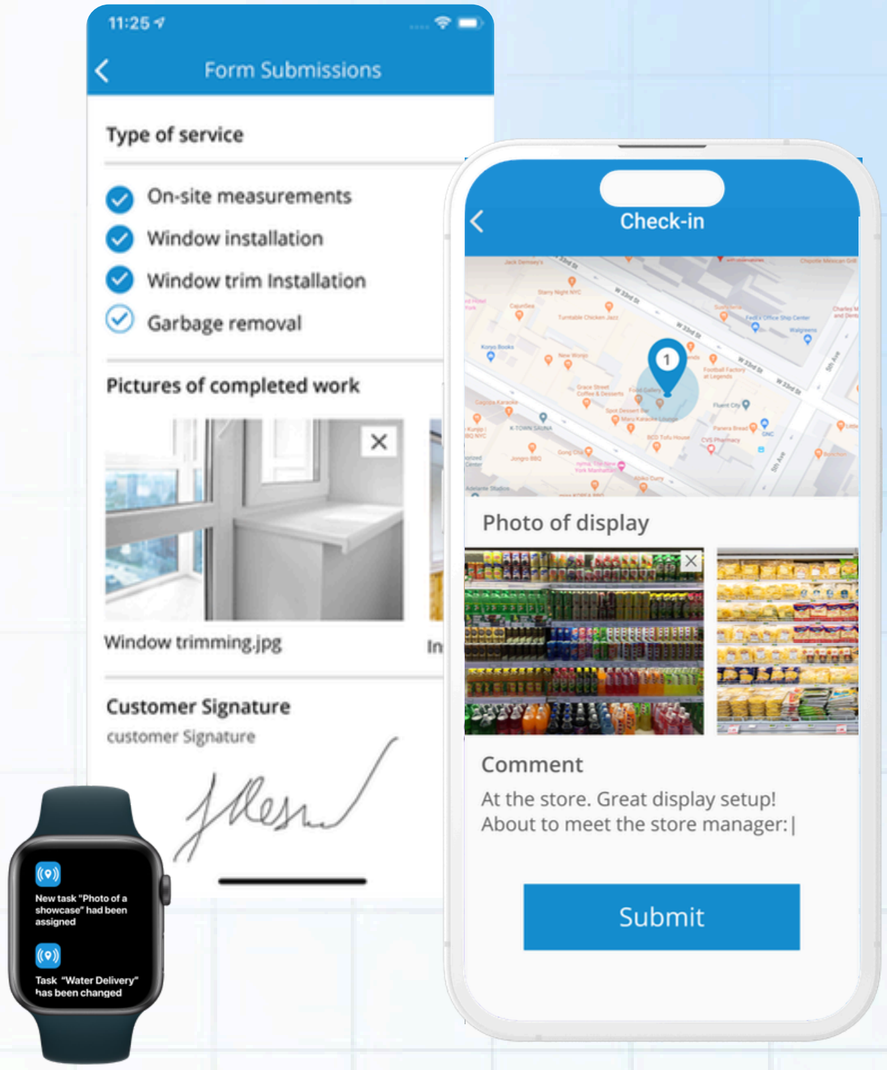


Construction industry

Task assignment and monitoring

Field workers can be assigned daily tasks through the app, and managers can monitor completion in real time. This ensures that projects stay on schedule, and any potential delays can be addressed immediately.

You can assign tasks to roofers or electricians and receive instant updates from the field, complete with photos and signatures.

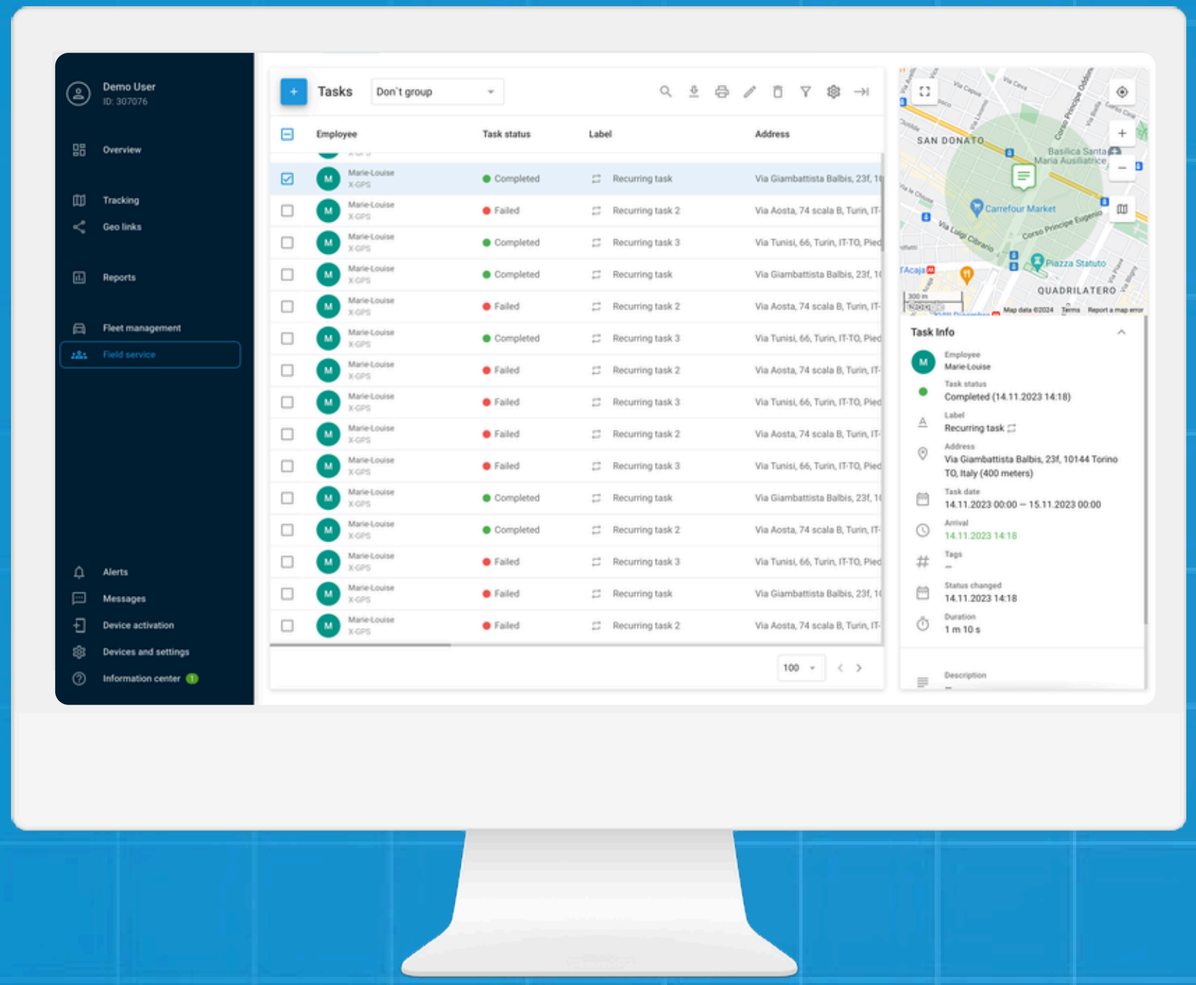


Construction industry

Real-time tracking

The X-GPS Tracker app's real-time tracking capability allows construction companies to monitor not only their vehicles but also their workers, ensuring that work sites are being attended to and productivity remains high.

It offers features like check-in capabilities, which act as a clock-in system, helping managers better understand how time is spent on site.



Construction industry

Real industry examples

Roofing companies:
scheduling tasks for their field workers and tracking progress in real-time.

Well drilling companies:
tracking vehicles arriving on-site and documenting completed work, helping avoid any discrepancies.

Restoration companies:
sharing before-and-after photos of work, providing a clear and transparent process to stakeholders.

Remodeling firms:
daily progress updates through images, allowing task routing to contractors as projects advance.

Electric companies:
allowing field electricians to file quick feedback to managers on the job, ensuring smooth operations.
